

PRODUCT OVERVIEW

The Aspen Collection

The Sierra Pacific Aspen Collection is a revolutionary, industry-leading and aesthetically-superior window line featuring Casements and Awnings. With an extraordinary breakthrough in window technology, the locking hardware, normally visible on the side jamb of the window, is hidden.

The Casement Window

Casement Windows have lock handles on the side jamb opposite the hinges. They crank open to the exterior for ventilation. French Casements feature one frame with two sashes that open outward from the center for an unobstructed view. We also offer Radius Casements with an arched top.

The Awning Window

Perfect for ventilation above your sightline and for daylighting or clerestory applications, Awning Windows open outward from the bottom to allow the air to circulate. Alone or mulled in combinations, Awnings are a versatile solution for areas in need of light and ventilation.

The Sedona Collection

The Sedona Collection is composed of push-open Casement and Awning Windows built with Old-World craftsmanship featuring interior wooden screens and dark oil-rubbed hardware made from sand-cast bronze.

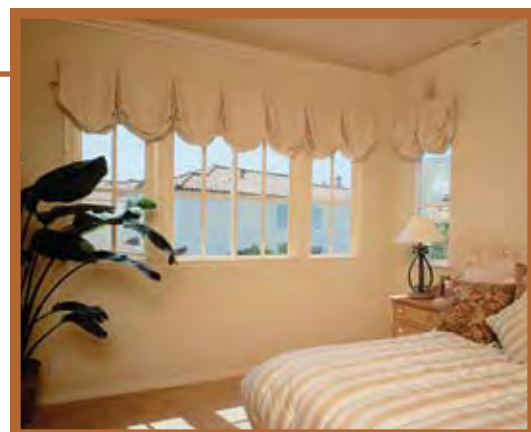

The Carmel Double Hung Window

The Carmel Double Hung Window combines classic style with the latest in innovative window technology. Both the top and bottom sashes slide open for convective airflow. The Carmel features aesthetically-pleasing, concealed jamb liners, checkrail tilt latches for additional security and jamb jacks for ease of installation.

The Horizontal Sliding Window

With an operable sash that slides by a fixed sash, the Horizontal Sliding Window is a good solution for areas with limited space. This window also provides the convenience of a pass-through from the interior to the exterior of your building.

PRODUCT OVERVIEW

Geometric and Radius Shapes

Made from glass set directly into a frame, Sierra Pacific Geometric and Radius Shape Windows are the focal point of most buildings. Available with an optional sash to match glass sightlines of other products, these windows give you the versatility to create unique designs.

Bay and Bow Windows

Sierra Pacific Bay Windows are available in 30, 45 or 90 degree angles and feature a center picture window with your choice of flanking double hung or casement windows. Our Bow Windows are composed of four, five or six window units mullered together at a ten degree angle to create a graceful sweeping curve.

Patio Sliding Door

With a vent panel that slides past a stationary panel, these doors are the perfect solution for ventilation in rooms with limited floor space.

Hinged French Doors

These classic beauties are available in inswing, outswing or center-hinged configurations. Sierra Pacific French Doors feature stainless steel multi-point locking hardware with handle sets available in a variety of styles and finishes to complement any design.

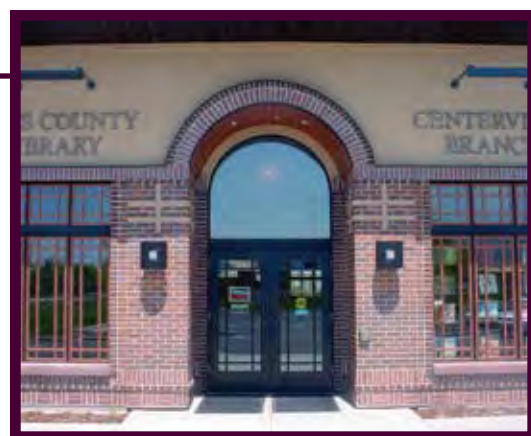

The Sliding Glass Pocket System

This unique door system features sliding door panels that open into a pocket in your wall to create a seamless transition between your interior and exterior living areas.

The Commercial Door

Designed with substantial proportions, a low-profile, ADA-compliant sill and heavy-duty hinges, our door is the logical choice for your next commercial project.

The Flexible Access Door

The Sierra Pacific Flexible Access Door is the perfect counterpart to our Commercial Door. Featuring a low-profile sill, multi-point locking hardware on the active door panel and flushbolts to anchor the inactive panel, this door provides both security and accessibility.
